Farm Income and Production Costs

for 2010:

Advance Report

This publication is prepared in the Department of Agricultural and Consumer Economics, College of Agricultural, Consumer and Environmental Sciences, University of Illinois at Urbana-Champaign by Dwight D. Raab, State Coordinator, Bradley L. Zwilling, Farm Business Analyst & Data Processing Specialist, and Jim Locher, Staff Development and Outreach Coordinator, Illinois FBFM Association, for use by FBFM field staff at meetings held in March 2011 and distributed to University of Illinois Extension staff. All data is based on Illinois Farm Business Records kept in cooperation with the Illinois Farm Business Farm Management (FBFM) Association and this department. An update of this report will be published in the *86th Annual Summary of Illinois Farm Business Records for 2010*.

The Illinois Farm Business Farm Management Association, in cooperation with University of Illinois Extension and the Department of Agricultural and Consumer Economics, has been providing farm recordkeeping and business analysis services to Illinois farm operators for over 80 years.

FARM INCOME AND EARNINGS

Average size, income, returns, and costs on Illinois FBFM record-keeping farms by type of farm—2006 to 2010	1
Summary of income, corn yields, crop and livestock returns by farm type and location, average per farm—2006 to 2010	2
Net farm income and other selected factors, Illinois FBFM Association—2010	3
Operators' share of labor and management income per farm—2008, 2009, and 2010	4
Net farm income per operator and estimated change in net worth after living expenses and taxes—2010	5
Capital debt repayment capacity (CDRC), Illinois farms—2006 to 2010. XXXXXXXXXX	6
Operators) net farm income, income before depreciation, and interest paid—2001 to 2010.....	7
Selected financial factors—2010 XXXXXXXXXXXX	8
Selected FBFM factors—2001 to 2010	9
Financial characteristics of Illinois FBFM grain farms	10
Financial characteristics of Illinois FBFM hog farms	11
Financial characteristics of Illinois FBFM beef farms	12
Financial characteristics of Illinois FBFM dairy farms	13
Illinois FBFM Association farms by interest paid as percent of gross farm Returns—2003 to 2010	14
Operators) net farm income by interest paid as a percent of gross farm returns	15
Illinois FBFM management returns per tillable acre by farm type.....	16
Summary of farm and family sources and uses of dollars—2001 to 2010	17
Equivalent cash rent based on landlord's crop-share data—1985 to 2010	18
Landlord's net rent per tillable acre on full tenant farms, crop-share lease—2001 to 2010	19
Central Illinois grain farms—Operator)s share of labor and management earnings	20
Central Illinois grain farms—Value of production per \$1.00 of nonfeed cost.....	20

Northern Illinois grain farms—Operator's share of labor and management earnings.....	21
Northern Illinois grain farms—Value of production per \$1.00 of nonfeed cost	21
Southern Illinois grain farms—Operator's share of labor and management earnings.....	22
Southern Illinois grain farms—Value of production per \$1.00 of nonfeed cost	22
Illinois hog farms—Value of production per \$1.00 of nonfeed cost.....	23
Illinois dairy farms—Value of production per \$1.00 of nonfeed cost.....	23

COST OF PRODUCTION—CORN AND SOYBEANS

Cost per acre to grow corn and soybeans—Northern Illinois grain farms (56-100 SPR)	24
Cost per acre to grow corn and soybeans—Central Illinois grain farms (86-100 SPR).....	25
Cost per acre to grow corn and soybeans—Central Illinois grain farms (low soil rating of 56-85 SPR)	26
Cost per acre to grow corn and soybeans—Southern Illinois grain farms	27
Illinois cost to grow corn—1976 to date	28
Illinois cost to grow soybeans—1976 to date.....	29
Costs and returns per bushel of corn—Central Illinois grain farms, 2001 to 2010	30
Costs and returns per bushel of soybeans—Central Illinois grain farms, 2001 to 2010	30
Trends in selected operating costs per acre—Central Illinois pure-grain farms, 2001 to 2019	31

COST OF PRODUCTION—LIVESTOCK

Livestock enterprise standards of performance—2010.....	32
Livestock returns above cost of feed and purchased animals—2006 to 2010.....	34
Cost to produce pork, farms under 500 litters—2007 to 2010	35
Cost to produce pork, farms over 500 litters—2007 to 2010	36
Cost and returns per 100 pounds of pork, farms with over 350 litters—2001 to 2010	37
Returns per \$100 of feed fed for hog farms—2001 to 2010.....	37
Costs and returns for beef-feeding enterprises—2007 to 2010	38
Costs and returns per 100 pounds of milk—2007 to 2010	39

DEFINITIONS

Crop Returns—The sum of grain, seed, and feed sales; the value of homegrown seed used; the value of all feed fed (except milk) and pasture; government farm program crop subsidy payments received and accrued; crop insurance proceeds received and accrued; and the change in feed and grain inventories less value of purchased feed.

Return above Feed Cost—The sum of livestock and livestock products sold, change in inventories less value of livestock purchased, and market value (opportunity cost) for all feeds fed.

Operator(s)—If months of operator labor are 12 or less, then there is one operator for the farm. If months of operator labor are more than 12, then the number of operators is determined by taking months of operator labor divided by 12.

Operators' Share Net Farm Income—The sum of all operator's share of gross sales plus net change in inventory and capital accounts less all expenses for items purchased, including interest paid and annual depreciation. This is the accrual earnings available to pay living expenses, pay income and social security taxes, and make principal payments on term debt.

Operators' Share Labor and Management Income—The wage (salary) for all operators of this farm, whether tenant-, part-owner-, or owner-operated, earned for labor and management performed. It is net farm income reduced by a charge for unpaid family labor used (non-operators), and 5.0 percent interest on equity capital (2.75 percent on current indexed value of bare land to reflect a normalized annual net rent).

Return per \$1.00 of All Cost—The overall farm efficiency ratio (profit margin) showing total value of all farm production per \$1.00 of all non-feed cost on the total farm.

Grain Farms—Farms on which the value of the feed fed to livestock was *less* than 40 percent of the crop returns.

Hog or Beef Farms—Farms on which the value of feed fed was *more* than 40 percent of the crop returns and either hog or beef cattle enterprises received *more* than half of the value of the feed fed.

Dairy Farms—Farms on which the value of feed fed was *more* than 40 percent of the crop returns and where dairy enterprises received *more* than a third of the value of feed fed.

HIGHLIGHTS FOR 2010

Average farm operator returns for labor and management on 2,588 Illinois farms were higher for all geographic areas in the state in 2010 compared to 2009 and above the average for the last five years. The average return to the sum of all operator's labor and management income in 2010 was \$160,118. The 2010 returns were \$115,567 above the 2009 average of \$44,551 and \$35,208 above the average for the last five years. A reasonable charge for the farm's debt-free capital invested in machinery, equipment, land, and inventory averaged \$44,513. Combining this amount with the return to operator's labor and management (sum of all operators) resulted in average operators' net farm income of \$204,631. Higher new crop prices along with lower fertility and drying costs were the main reasons for the higher incomes. Returns above feed cost for all livestock enterprises were higher than the year before. Hog returns above feed costs were higher due to higher prices received. Returns to dairy enterprises were higher due to higher milk prices. Continued high grain prices resulted in minimum farm program payments. Thus, total government payments received in 2010 by producers were at low levels, but the highest since 1996 due to ACRE and SURE payments. Farm earnings were highest in the northeastern part of the state. Earnings were lowest in the western part of the state.

Corn yields were below the 2009 yield as well as the five-year average. Corn yields were 18 bushels per acre lower in 2010 and 16 bushels per acre below the five-year average. Soybean yields were 5 bushels per acre higher than in 2009. The average corn yield on the 2,588 farms was 164 bushels per acre. Soybean yields averaged 55 bushels per acre. Corn yields were generally highest in the northern part of the state while soybean yields were generally highest in the central part of the state. Too much rainfall lowered yields in certain parts of the state, including western

Illinois. Year-end inventory price for the 2010 corn crop of \$5.50 per bushel was \$2.00 higher than a year earlier. Soybeans were inventoried at \$13.00 per bushel, \$3.25 higher than December 31, 2009. The average sales price received for the 2009 corn and soybean crop sold in 2010 was above their inventory price resulting in a positive marketing margin. Crop returns averaged \$755 per tillable acre, \$100 per acre higher than the 2009 crop returns. The average crop returns per acre were at an all time high in 2010.

Returns above feed cost to all livestock enterprises were higher than the year before. Also, returns to all five enterprises in 2010 were above the last five-year average, except dairy. Dairy and beef cow enterprises experienced slightly lower feed costs in 2010 compared to 2009. Mainly due to the higher non-feed costs, returns for farrow-to-finish hog producers were estimated to be about \$3 to \$8 per hundredweight below the breakeven level in covering total costs in 2010. Dairy producers experienced higher returns due to higher milk prices, \$1,506 returns above feed per cow in 2010 compared to \$838 in 2009. Milk prices were 24 percent higher compared to the year before. Returns to feeder cattle enterprises were higher than the year before as well as the five-year average. Prices received for market cattle were higher than the year before, and prices paid in 2010 for feeder cattle were above the year before. Returns above feed per cow increased for beef cow enterprises due to higher prices received for beef. Returns were the second highest during the last five years.

Estimates in net worth change can be made by adjusting net farm income for nonfarm income, withdrawals for family living, and income and social security tax paid. This amount would be a modified-cost-basis change in net worth, which excludes changes due to inflation. As seen on page 5, estimated changes in net worth

showed increases statewide. Changes in net worth among individual farm operators will vary greatly due to differences in farm and nonfarm income and family living withdrawals.

The average amount of interest paid per farm is shown on pages 3 and 6. Average farm interest paid in 2010 was \$22,128, up \$1,103 from 2009. Looking at the last ten years on a per-acre basis, interest paid has decreased from a high of \$25 in 2007 to a low of \$17 in 2004 but increased to \$21 in 2010. Interest paid as a percentage of gross farm returns was 3.3 percent in 2010 compared to 3.7 percent in 2009.

Some key financial factors, such as the current, debt-to-asset, and debt-to-equity ratios, can be found on pages 10 to 14 by type of farm. This type of information is useful in providing some benchmarks when evaluating the financial efficiency of a farm operation.

Returns and costs for crops and livestock enterprises can be seen on pages 24 to 39. Returns to farrow-to-finish hog producers were higher than the year before. Total returns averaged \$53.74 per hundredweight in 2010 compared to \$39.13 the year before. Feed costs increased, averaging \$33.96 per hundredweight. The average price received per hundredweight for slaughter cattle, and the price paid for replacement feeder cattle were higher than the year before. Dairy returns were higher due to higher milk prices. The price received for milk was higher than the year before.

Total economic costs per acre to produce corn and soybeans in 2010 decreased as compared to 2009 in all areas of the state. The main factors for the decrease in per acre costs were lower fertilizer, pesticides, and drying costs. Cost per bushel to produce corn increased in all areas of the state, except in the northern part due to lower yields. Cost per bushel to raise soybeans decreased in all areas of the state because of lower fertilizer costs and

higher yields. Soybean yields were 1 bushel per acre higher in all areas of Illinois, except in central Illinois with the lower rated soils which had no change. Total economic costs per acre to raise corn and soybeans on these farms averaged \$705 and \$515, respectively.

From a sample of pure grain farms in the state, the total economic cost per bushel of corn produced was \$4.30 with an average yield of 164 bushels per acre. The total cost per bushel of soybeans was \$10.24 with an average yield of 56 bushels per acre. This compared with costs per bushel of \$4.11 and \$10.24 for corn and soybeans, respectively, in 2009. This was the highest cost per bushel to grow corn since this study began in 1972. The 2010 cost to grow soybeans was tied with 2009 as the highest cost per bushel since this study began in 1972. The variation in yields and costs during the past few years makes it important to analyze these costs over more than one year. The 2006-10 five-year average to produce corn and soybeans on these farms is \$3.48 per bushel for corn and \$9.01 per bushel for soybeans.

In summary, farm earnings in 2010 were significantly higher than the 2009 earnings and above the average for the last five years. Higher new crop prices along with lower soil fertility and drying costs were the main reasons for the higher incomes. Livestock returns were higher for all enterprises primarily due to higher prices received.

Illinois Farm Business Farm Management Association

FBFM is a cooperative educational-service program designed to assist farmers with management decision making. It is available to all farm operators in Illinois. There are nine local not-for-profit associations organized to provide services throughout the state. The FBFM program provides:

- Financial and production business analysis reports.
- Experienced Farm Analysis Specialist to help interpret analysis reports and counsel on management problems.
- Computer-assisted record-processing options—on-farm or service center.
- Assistance with business and family records.
- Assistance with income tax management.

To find out more about FBFM, contact the Illinois FBFM Association state office or one of the local associations listed below.
